

VEGETABLE GARDEN PLANTING GUIDE

Vegetable Gardens

By Charles Marr Extension Specialist

A well-planned, properly tended vegetable garden can provide not only an excellent source of fresh, nutritious vegetables, but also relaxation and enjoyment for the entire family. With a few simple tools, a little space, and a desire to assist nature in plant growth, anyone can be a successful home gardener. This publication is a brief guide to vegetable gardening planting information.

Common Garden Problems			
Symptom	Possible Causes	Corrective Measures	
Plants stunted in growth; yellow color	Lack of soil fertility or soil pH abnormal	Use fertilizer and correct pH according to soil test. Use 3 to 4 pounds of complete fertilizer per 100 square feet in absence of soil test.	
	Plants growing in compacted, poorly-drained soil.	Modify soil with organic matter or coarse sand.	
	Insect or disease damage	Use a regular spray or dust program.	
	Poor-quality seed or plants	Use high-quality seed or plants of recommended varieties.	
Plants stunted in growth; sickly, purplish color	Low temperature	Plant at proper time. Don't use light-colored mulch too early in the season.	
Holes in leaves; leaves yellowish and drooping, or distorted in shape	Insect damage	Use recommended insecticides.	
Plant leaves with spots; dead, dried areas; or powdery or rusty areas	Plant disease	Use resistant varieties, remove diseased plants when they are noticed, and use a regular spray.	
Plants wilt even though water is present	Soluble salts too high or root system damage	Have soil tested. Use soil insecticides.	
Plants with weak root systems	Poor drainage	Use organic matter or sand in soil.	
	Insect or nematode damage	Use recommended varieties and soil insecticides.	
Plants tall, spindly and unproductive	Excessive shade	Relocate to sunny area. Keep weeds down.	
	Excessive nitrogen	Reduce applications of nitrogen	
Blossom drop	Hot, dry periods	Use mulch and water.	
	Low night temperatures	Avoid planting too early in spring.	
	Overwatering or disease	Stop watering or use regular spray program.	
Tomato leaf roll	Excessive pruning or soil moisture fluctuations	Remove suckers when small. Use mulches.	
Leathery, dry, brown blemish on the blossom end of tomato fruit	Blossom end rot	Maintain a uniform soil moisture supply. Avoid overwatering and excessive nitrogen.	

Steps to a More Successful Home Garden

- Use mulches to conserve moisture, control weeds and reduce rots.
- Keep plants free of insects and diseases.
- Examine plants often to keep ahead of potential problems.
- Keep weeds out.
- Remove tomato suckers as soon as they form (1 to 2 inches long).
- Sample soil and have it tested every three to four years.
- Apply fertilizer to garden area in recommended manner.
- Thin when plants are small.
- Avoid excessive walking and working in the garden when the foliage and soil are wet.
- Wash and clean sprayer well after each use.
